

International Patient Services

At PACE Rehabilitation, we offer a comprehensive package of care of prosthetic, orthotic and therapy rehabilitation services to overseas patients.

We understand the patient's needs, requirements and associated logistics of travelling from abroad, so offer a flexible coordinated multi-disciplinary team approach, with an additional fast-track service when appropriate.

With over 100 years of worldwide combined clinical experience, our team of clinicians deliver efficient rehabilitation by way of detailed medical assessments, provision of prosthetics/orthotics devices and associated therapy services.

We specialise in the provision of rehabilitation to people of all ages, with amputation or limb absence at any level, from partial foot and fingers to through the hip or shoulder.

We deal with the consequences of life changing events such as accidents, cancer and disease, including birth defects. We also have experience in other major life long disabling conditions secondary to neurological, vascular or orthopaedic events.

Medical Services

Our team is headed by a Consultant in Rehabilitation Medicine, with support from leading consultants in vascular and orthopaedic surgery.

Through joint assessments, we provide patients with detailed planned treatment programs, prescriptions and associated costs.

Catering for a variety of conditions, both pre and post operative assessments, our medical consultants also provide second opinions, advice and information to facilitate informed decision making by the patient.

Rehabilitation Services

Under the supervision of our Consultant in Rehabilitation Medicine, following a detailed assessment and consultation, a tailored, managed package of care is delivered by our specialist team of prosthetists, orthotists, physical and occupational therapists.*

A full rehabilitation program will include the provision of an assistive device, associated treatment and itemised costings. Orthotic and prosthetic devices have individual costings depending upon prescription, with the latter starting from £3,000.00 upwards. Clinician's time is charged by the hour.

We also offer therapeutic services, providing valuable psychological and emotional help and support when required.

Our services are provided on an out-patient, non-residential basis at our two clinical facilities (London & Manchester). We have established links with both the renown Cromwell and Wellington London Hospitals to provide the vascular and orthopaedic support, underpinning our holistic approach.

Referral process

We have a dedicated contact point for international referrals, to expedite efficient provision. Enquiries are welcome from all sources including referrals from medical and health parties and individuals.

To assist with visa applications, an appointment letter can be provided for submission to the authorities, when appropriate.
