

Cosmetic Socket Options

Standard Carbon / fibreglass

This is a standard textured finish which comes as a black carbon (*left*) or coloured fibreglass.

The colour options are restricted to the primary colours, available from Otto Bock, and Caucasian.

Transfer dipping

A high gloss patterned finish is possible (*right*).

This requires manufacture off site by an external third party. As such, your socket will be sent away for a week.

Bespoke finishes (Carbon FX and Fabric)

Fabric can be selected from the Otto Bock range, which your prosthetist will show you, or you can choose a fabric of your own (*below*), pillow cases work well for

this. Again, your prosthetist will advise you. If you bring in your own fabric, you must be aware that there is potential for imperfections in finish due to the unknown and unpredictable nature of the fabric.

An extra manufacturing process is required when fabrics are chosen, and the prosthesis will take longer to be delivered.

The Silver coloured Carbon FX gives the best result and should be chosen above the other colours if possible.

Note - potential issues in manufacture could lead to a heavier than normal socket. Your prosthetist will advise you whether this is suitable for you. Additional costs apply when selecting bespoke finishes.
